

## Introducing the next generation in energy-efficient productivity.

Get more from your hydraulic machinery than ever before with new Mobil DTE 10 Excel Series. Engineered to better address the lubrication demands of a new generation of high-pressure industrial and mobile equipment, Mobil DTE 10 Excel Series helps lift cleanliness and efficiency to new heights — as it helps lower operating costs. Which adds up to increased productivity.

Surpassing even the standard-setting Mobil DTE 20, Mobil DTE 10M, and Mobil DTE Excel hydraulic oils, known for their long life and keep-clean performance, new Mobil DTE 10 Excel Series is truly the new standard in hydraulic oils. These state-of-the-art, patent-pending lubricants represent the latest in hydraulic fluid technology and can offer great advantages:

- **Dramatically increased hydraulic efficiency, up to 6 percent better than standard products** — Helping reduce energy and fuel consumption, and increase machine productivity.\*
- **Visibly better system cleanliness** — For longer productive operation and decreased machine maintenance.
- **Outstanding durability** — For longer oil drain intervals and increased equipment protection.

So whether you manufacture plastics components or operate hydraulic-powered excavators or marine equipment, help reduce your power consumption and increase your machine output with Mobil DTE 10 Excel Series — a breakthrough that won't just make your machines run but will help them fly. On less energy, we might add.

\* Results are based on a controlled laboratory test and may vary depending on operating conditions.
